DETAILED ACTION

Allowable Subject Matter

1. Claims 12-16 are allowed.
2. The indicated allowability of claims 17-22 and 28 is withdrawn in view of "An ATM-Like System Architecture for Satellite Communications including on-board switching" by Baiocchi et al. (hereafter "Baiocchi"), found in Applicant's IDS submitted 10/14/04. Rejections based on the reconsidered reference follow.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 17-22 and 28 are rejected under 35 U.S.C. 102(b) as being anticipated by Baiocchi.

Regarding claims 17-22 and 28, Baiocchi discloses in a processing satellite communications system including at least one processing satellite having a receiver and a transmitter for respectively receiving and transmitting a data cell, a method for virtual path switching of said data cell, the method comprising: receiving a data cell at one of plurality of input ports of said processing satellite; examining an assigned VPI in said

data cell to determine a destination output port associated with said assigned VPI; transferring said data cell to said destination output port; establishing a set of VPIs wherein each VPI is uniquely associated with a single output port on said processing satellite; establishing a set of virtual channel identifiers (VCIs); assigning said VPI from said set of VPIs and a VCI from said set of VCIs to said data cell and transmitting said data cell to said processing satellite; wherein said step of assigning an externally managed VPI and an externally managed VCI, and wherein said step of examining comprises examining said assigned externally managed VPI in said data cell to determine a destination output port associated with said assigned externally managed VPI (see pages 391-393, Section 2.3).
